1. My provision of health care is effective in aiding any population regardless of race/ethnicity.
2. It is difficult to keep patient care issues confidential when someone is HIV positive.
3. Cultural sensitivity will aid me with effectively assessing their health conditions.
4. If I have a question about HIV or AIDS, I know where to get accurate information.
5. Culture is second priority to treatment or intervention.
6. People with AIDS should go to specialists for routine treatment.
7. Cultural differences can cause communication problems between the patient and the health care provider.
8. I am not interested in caring for patients with HIV/AIDS.
